# Tattoo Removal by Infrared Coagulation

- Safe, fast, proven results
- Effective on all pigments
- Most tattoos removed in 1 to 3 sessions
- Treats condyloma, warts, and other skin lesions
- Satisfaction 100% guaranteed

## Offers a sensible solution for your patients who want tattoo removal but can't afford laser treatment

Many patients want to remove tattoos—but simply can't afford the time or expense associated with laser treatment—which can take months! Infrared coagulation offers your patients fast, successful removal with significantly fewer sessions and at lower cost.

## Fast and easy to perform

Infrared coagulation to remove tattoos is accomplished under local anesthesia and takes only a few minutes to perform. Depending on the size of the tattoo, most pigment can be removed within 1 to 3 sessions. Following treatment, an antibiotic ointment is applied once daily and covered with a nonadhesive pad for 2 to 3 weeks.

## A record of success

Many thousands of patients have had unwanted tattoos removed with the **REDFIELD IRC 2100™** Infrared Coagulator. In addition, infrared coagulation is an effective treatment for condyloma, warts, and other skin lesions.

## Satisfaction guaranteed

The IRC 2100 is a highly versatile and affordable medical device, especially in relation to laser equipment. In addition, you must be 100% satisfied with your IRC 2100, or we'll refund your full purchase price up to 1 year after purchase.

Before treatment

8 weeks after treatment
